

SX-790 Instructions:

How to set combination lock:

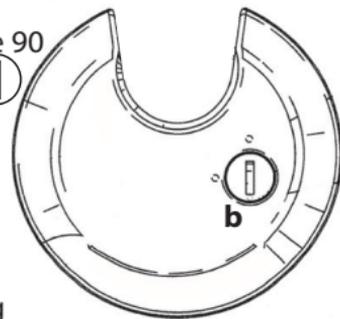

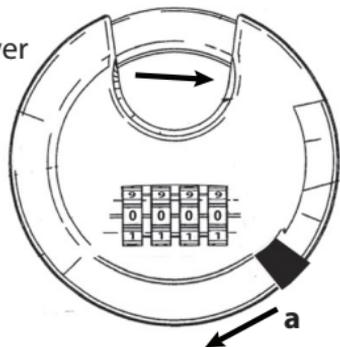

- 1 Turn dials to opening combination (factory default is 0-0-0-0)
2. Slide lever **(a)** underneath combination from right to left to open shackle .
3. On back of lock, use paper clip or screw driver to turn change screw **(b)** counter clockwise 90 degrees to horizontal position. 
4. Lock is now in reset mode. Turn dials to desired combination.

Note- you will not be able to lock padlock until you finish step 5.

5. Double check dials that they are at desired combination. Turn reset screw **(b)** clockwise 90 degrees back to original vertical position. 
6. Lock is now set to new combination. Please write it down so it is not forgotten.

You will now be able to close shackle to lock. In the future, to reset your combination, it will always first need to be on the current opening combination prior to turning change screw.
